

Lesson 29: Prioritizing Systems by Impact

Task:

Take a moment to rate **OpenMRS's** confidentiality impact as High, Moderate, or Low, and write a one-liner why.

Answer:

I'm rating OpenMRS's confidentiality impact as **High** because if a breach occurs, data integrity would or could be at risk. An example of that would be the personal health data in OpenMRS being tampered with. This could lead to the possibility of doctors making wrong decisions about a patient, or administering the wrong drugs/dosages, which could be potentially life-threatening. The effect would be catastrophic and severe, thus its **High Impact** rating.
